Define Problem Statements (Customer Problem Statement Template)

The problem statement below follows the standard "I am ... trying to ... but ... because ... which makes me feel ..." format, framed from the perspective of a self-learner using an online platform.

PS	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	A student learning a new topic online (e.g. Computer Science, Mathematics)	Understand a difficult concept and complete my coursework	I get stuck and my confusion, frustration or boredom is invisible to the platform	Traditional e-learning tools only track what I click, not how I feel about the material	Unsupported, anxious and more likely to give up before mastering the topic
PS-2	A student who is progressing well and starting to feel confident	Keep growing and take on harder challenges	The platform keeps showing me the same difficulty of content regardless of my confidence	There is no signal that tells the system I am ready to be pushed further	Bored and under-challenged, which reduces my engagement over time

Resulting Problem Statement

Self-learners on digital platforms have no way to express or have their emotional state (confusion, frustration, boredom, confidence, curiosity) recognised while learning, which leads to disengagement, silent struggle, and higher drop-off, because existing platforms are built to track activity, not affect.
