Team / Submission ID	
Project Name	Emotion Detection & Learning Support Engine
Submitted By	Venu Gopal (Sole Team Member / Team Lead)
Maximum Marks	2 Marks

Customer Journey Map

Mapped across three stages: discovering the platform while stuck on a topic, describing the problem, and receiving personalised AI support.

Phase of Journey	Stage 1: Hits a Learning Block	Stage 2: Describes the Problem	Stage 3: Receives AI Support
Actions	Searches notes/videos; opens the learning platform in a new tab.	Selects a subject field and types a free-text description of the problem.	Reads the AI response and recommended action; may regenerate or try another example.
Touchpoint	Streamlit landing page ("Emotion Detection & Learning Support Platform").	Field selector, problem text area, and quick-example buttons.	Model comparison panel, AI response card, and analytics dashboard.
Customer Thought	"Maybe this tool can actually understand what I'm going through."	"I hope it picks up that I'm frustrated, not just confused."	"This response actually reflects how I feel."
Customer Feeling	Hesitant, slightly hopeful.	A little vulnerable, curious.	Reassured, more motivated to continue studying.

Process Ownership	Opportunities
Sole developer (Venu Gopal) owns UX, model pipeline, and Gemini integration end-to-end.	• Add onboarding copy explaining how emotion detection works, to build first-time trust. • Surface the BiLSTM vs BERT comparison earlier so the student sees model transparency. • Persist history across sessions (not just in-memory) so returning learners see their trend.
